## **American Electric to outfit Ventech refineries**

**LENGTH:** 147 words

American Electric Technologies Inc. has agreed to provide Ventech Engineers International Corp. with a custom engineered power delivery system in a contract valued at \$1 million.

Houston-based energy solutions company American Electric (NASDAQ: AETI) said it will manufacture and install an M&I Electric 480-volt and 5,000-volt switchgear and bus duct by the end of August, as well as provide technical implementation services for Ventech's refineries.

Pasadena, Texas-based Ventech, which designs and relocates refineries and process plants, has purchased decommissioned refineries in the northeast United States, and will dismantle, ship and reconstruct them in Pointe-a-Pierre, Trinidad, for a Petromin and **World GTL** Inc. partnership.

The project calls for an updated electrical system, tanks, crackers and vessels. Once rebuilt, the plant will have a 30,000-barrel-per-day capacity.
